For example: trader deposits \$2000; equity falls to \$1800; and then rises to \$2500. Return on equity is 25%. Peak drawdown is 10% (from \$2000 to \$1800). The trader's risk/reward value for ranking in the competition is $25\% \times 90\% = 22.5\%$.

28. If two or more participants share the same risk/reward score, the higher ranking will be granted to the one with the highest growth percentage. If the participants share the same growth percentage as well, the higher ranking will be attributed to the one with the biggest number of trades. If the number of trades is the same, the higher ranking will be granted to the one with the highest returns in actual EUR/USD.
